

Patient: Fatima B.    MRN: 20984    DOB: 1965-11-02    Date: 2026-05-20    Dept: Oncology

Assessment

Patient denies weight loss, night sweats, or fever. Examination shows no palpable lymphadenopathy. CT chest/abdomen/pelvis: no evidence of malignancy. No hepatic or pulmonary lesions identified. Pulmonary embolism was ruled out on CT angiogram. Hepatitis B surface antigen non-reactive. There is no family history of breast cancer. Biopsy negative for malignant cells.

Notably, the patient does have a benign thyroid nodule, stable since 2023.
